

St. F.X. University - The Lunar-tics “Houston, We Have to Destroy Hunger”

NASA has been at the forefront of space age technology, and our project takes the classic Stage-2 Discovery space shuttle and turns it into a tower of food, blasting off away from hunger. Like the complexity of the true shuttle, our design will be large and extravagant, and feature a well-balanced healthy diet, all while soaring above the crowd. The name of our design comes from the popular scene in *Apollo 13*, when the shuttle faced a disaster, and Tom Hanks said, “Houston, we have a problem.” Similar to the technical difficulties faced in space, hunger is an astronomical issue that will be conquered can by can.

Team: Adam Mitchell (Captain)
Molly Flynn
Jeremy Graham
Olivia Gregan
Ben Hillier

Other Team Members: Rielle Jensen, Jeff Leonard, Camden Macdonald, Keegan MacDonald, Dani Makar, Kejd Marika, Jake Milford, Kaden Mior, David Quinn, Hannah Sampson, Scott Smith, Adam Tolton.

Special thanks to: Our professor, Dr. Emeka Oguejiofor, Nova Construction, and all of our contributing sponsors.
